CONFERENCE

22 NOVEMBER 2025
LONDON

**TODAY'S EXPERTISE
TOMORROW'S LEADERS**

QUEEN ELIZABETH II CENTRE | LONDON

WELCOME

Interface Expo returns for its fourth year, once again setting the standard in non-surgical aesthetics education with a programme that is bigger, bolder, and more ambitious than ever before.

Founded in 2022 by Mr James Olding, Interface Expo has already delivered three sold-out events, uniting world-leading speakers, pioneering research, and an unparalleled faculty of independent experts from across the globe.

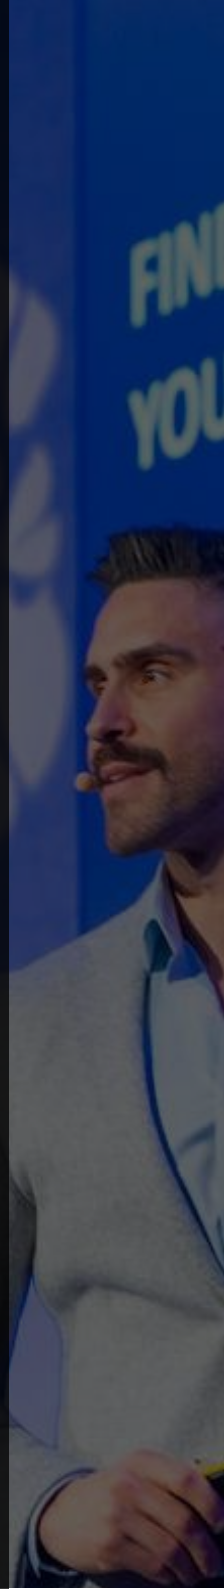

This year's event brings together today's expertise with tomorrow's talent – creating a unique space where established leaders and rising stars in aesthetic medicine can collaborate, connect, and grow.

Our agenda combines cutting-edge clinical education, inspiring research, and live injection demonstrations, with insights spanning multiple specialties and the latest international innovations.

Alongside world-class lectures, delegates can look forward to lively debates on the key issues shaping the profession, participating in our Meet the Expert sessions, and networking with like-minded colleagues in an intimate yet dynamic conference setting.

Interface Expo is also proud to champion academic excellence. Each year, hundreds of research posters and articles are submitted for review, with the most outstanding projects selected for presentation – many of which go on to be published, reinforcing the Expo's reputation as a truly international research meeting.

Taking place on **Saturday 22 November 2025 at the QEII Centre, London**, this year's Expo will welcome professionals from across the aesthetics spectrum. Whether you are an experienced injector or at the start of your career, join us this November for world-leading education, groundbreaking research, and the chance to be part of the UK's most exciting aesthetics event.

Hyaluronic Acid (HA) and Calcium Hydroxyapatite (CaHA)			
HA	Used in the dermal filler market for over 10 years	An important structural component of the extracellular skin matrix	Injectable HA is biodegradable and has a well-established safety profile in aesthetic medicine
CaHA	Used in the dermal filler market for over a decade	A naturally occurring mineral in the body that makes up the structure of bone	It is fully biodegradable and biocompatible, with little to no inflammatory response
